

Stepping Up To Custom Metal Design Leaves Downtown Behind!

Because the requirements for Air Conveyor Systems vary so widely, it takes a unique combination of highly trained personnel and precision equipment to meet the exact specifications of each job. At Custom Metal Designs we've made a long-term investment in both ... and the results are obvious!

Production Line Efficiency Is Designed Into Each And Every Part Of Your System

Maximizing the use of your plant floor space is accomplished by combining a variety of standard system modules (straight sections, curves & elevators) with custom engineered sections that meet the specific needs of your production area. Unlike some mechanical systems, Custom Metal Air Conveyors are ideal for high-speed container applications. By reducing the number of moving parts our Air Conveyor Systems have fewer maintenance problems, which equates to far less downtime.

Plus, versatility is also a key ingredient. Ours offers quick adjust side rails and neck guides to ensure a quick and effective line change.
